

DATA CONVERSION IN TELECOMMUNICATION SYSTEMS

5

ABSTRACT

10

A method and system for receiving data from a telecommunication service provider. Validation rules for analyzing data items in a first format and population rules for converting the data items into a second format are specified. A set of data items in the first format are received by the service provider and analyzed according to the validation rules.

15

The data items are then converted to the second format according to the population rules.
